FlexITy Achieves Cisco's Advanced Borderless Network Architecture Specialization

RICHMOND HILL, ON (January 30, 2011) – FlexITy, recognized as one of Cisco's Global Partners of the Year, and an enterprise provider of Cloud Solutions, Unified Communications, Data Centre Technologies and Managed Services, announced today that it has achieved Cisco's coveted Advanced Borderless Network Architecture Specialization, in support of the ever-expanding role of borderless networks.

“The Advanced Borderless Network Architecture Specialization is one of the toughest to achieve, as it combines Wireless, Routing and Switching, and Security all in one solution,” observed George Thorogood, director of professional services and programs for FlexITy. “We are most excited about bringing this architecture approach to our clients' network connectivity – as we are fully committed to the notion of anytime, anywhere, secure access to vital network resources, and the value it delivers to our clients around the world.”

This specialization demonstrates FlexITy's ability to engineer complex network solutions - those that allow organizations to connect anyone, anywhere, anytime and on any device. Cisco's Borderless Network Architecture relies on a combination of routing, switching, security, wireless and WAN optimization solutions – wherein FlexITy seamlessly

integrates these components, to create a secure, reliable and intelligent enterprise-grade network.

“As a Cisco Advanced Borderless Network Architecture Specialized Partner, FlexITY has made a significant investment in the training and equipment necessary to connect people, information and devices securely, reliably and seamlessly anywhere and anytime to support today’s borderless business environment,” said Wenceslao Lada, vice president of Borderless Network Architecture for the worldwide partner group at Cisco.

“FlexITY strives to pioneer and deliver innovation around the integration of the technology solutions that empower our clients,” said Nolan Evans, chief architect for FlexITY. “The Cisco Advanced Architecture Specializations are a clear example of our desire to lead the next chapter in IT’s integration into the business – not as an ancillary component, but as a primary, strategic investment – a true business developer, driver, and differentiator,” Evans added.

About FlexITY

FlexITY Solutions Incorporated (FlexITY) is a leading provider of voice, data, and converged and managed services for businesses throughout Canada. FlexITY’s approach aligns best practices with its industry acumen to deliver unprecedented results for its clients, reducing costs and optimizing critical infrastructure management.
